

Side Squeeze Bale Grab

The CHW3 side squeeze bale grab is the ultimate grab for strength, versatility and design. For use on wrapped or unwrapped bales, squares or rounds, the heavy duty design of the CHW3 will maximise productivity. The heavy wall, circular tubed arms will protect bale wrapping and ensure a secure grip throughout

By opening parallel, the CHW3 allows for easy, tight stacking and the standard spill rail means potentially two bales can be stacked at a time. All models come with brackets and a pressure relief valve as standard.

Model	CHW3
Description	Side Squeeze Bale Grab
Open Width	1940mm
Closed Width	1025mm
Capacity	1400kgs

Features

Spill Frame, prevents bales falling back over the grab

CHS Frame, Circular hollow section arms prevent wrapping tears whilst maintaining strength

Parallel Closing, allows for unrivalled ease of stacking, precision and time efficiency

Brackets, integral to the design and strength of the bale spike. Standard on all models

Clean Frame, the back frame and any contact points are designed to not have any points where wrapping can tear
