

Fork Angles

Fork Mast Level Indicator

ForkAngles is an innovative mast tilt indicator designed to be retro-fitted to Forklift Trucks. ForkAngles is mounted in the eye-line of the operator and gives a clear and precise indication of the mast tilt angle. Even novice operators will be able to accurately align the forks with the load, first time, every-time.

COST SAVING

ForkAngles ensures a greater degree of accuracy which, in turn, saves wear and tear on equipment and pallets.

TIME SAVING

ForkAngles provides a visual aid that gives more confidence to the operator. This allows them to increase speed, accuracy and therefore productivity.

HEALTH AND SAFETY IMPROVEMENTS

ForkAngles is a 'line-of-sight' indicator which can be viewed in peripheral vision. The improved accuracy allows for safer load handling and enables the operator to concentrate on their surrounding workplace.

ENVIRONMENTAL BENEFITS

ForkAngles increases accuracy and therefore decreases damage and subsequent waste.
