

Auto-Grip steel drum handler

The 6145 Auto Grip is a heavy duty gravity actuated, mechanical drum grip. It's actually more efficient than most hydraulic models on consistently sized loads, and its easy attachment allows a single operator to pick up, transport and unload empty or full drums up to 1500 pounds

The quality made Auto-Grip manually adjusts to fit 30, 55 or 85 gallon overpack drums for convenience in handling a varying workload, and handles most smooth sided fiber and steel drums as well as standard ribbed steel drums. Because plastic drums can easily loose their shape when gripped, they may not work efficiently with this unit

Model Ref	Max SWL (kg)	Max Fork Size (mm)	Fork Spread (mm)	Drum Types	Drum Range(mm)	Weight
FDH-6145	700	140 x 50	800	Steel	457-711	57kg

*The unit's contoured, recessed jaws are rubber lined and lift drums with gripping pressure exactly equalized to the weight of the drum. The **spring and cam** actuated jaws grip automatically as they engage the drum, maintain a constant grip and simultaneously release when the drum is set down*

For all your moving, stacking and palletizing needs, the Auto-Grip is fork mounted to be easily attached to or unattached from the lift truck in seconds and comes with a durable safety chain attached to secure the grip to the mast of the truck
