

Easy Reach Jib (ERJ)

Our best selling Easy Reach Jib offers the ideal solution for dedicated fork trucks lifting loads at a multiple load centre. To fit; simply remove the bottom rear hangers on the attachment back plate. Then simply lower the truck carriage and drive slowly forwards so as the truck carriage top rail contacts the jib backplate just below the attachments top hanger, raise the carriage if necessary so that a snug fit is achieved. Then simply re-fit the bottom hangers and ensure the jib is secured fully. Lifting may now commence.

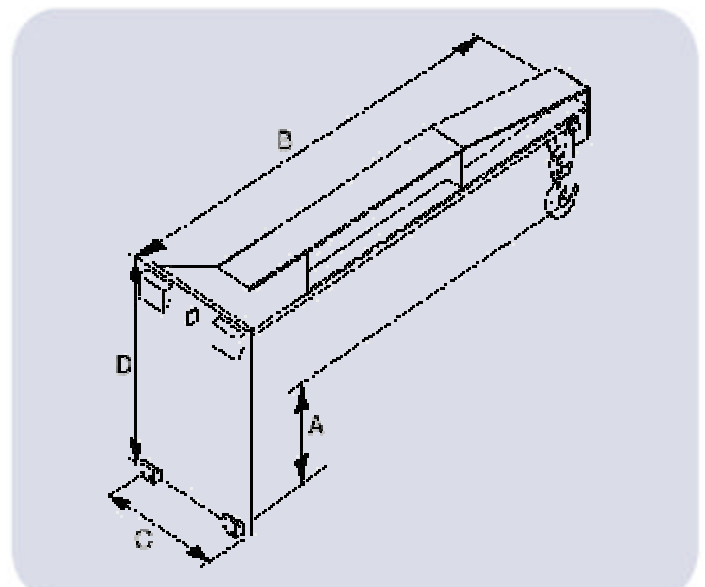

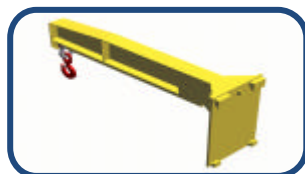

CONTACT Easy Reach Jibs are standard jib attachments for mounting directly to the fork truck carriage. Beam profile allows access in confined spaces.

Model Ref.	Truck Capacity	"A" Hook Height	"B" Last Hole	Carriage Cls	"C" Carriage Width	"D" Carriage Height
