

# Fork Protection - Magnetic Covers

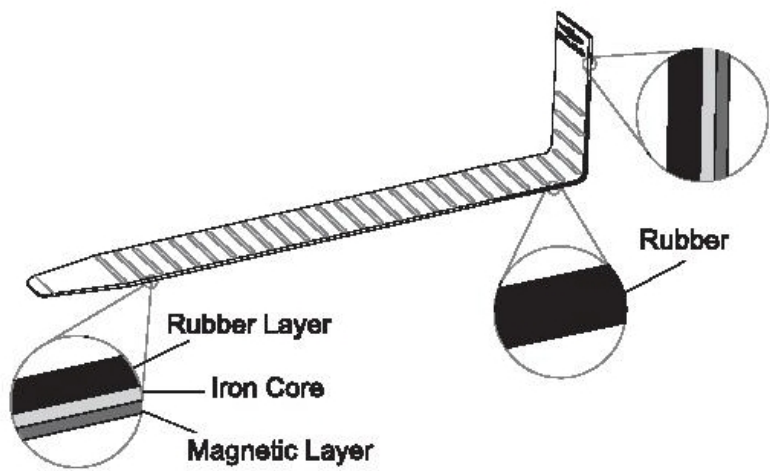

## Magnetic Fork Covers

Magnetic Fork Covers (DAGS) are ideal for handling loads where product damage from steel forks must be avoided. These covers provide a protective barrier while adding extra stability for awkward or slippery items like barrels, metal boxes, or cages.

Fitted in seconds with powerful magnets, they offer secure retention and reduce slippage risks. The ribbed rubber surface enhances grip.

Choose DAGS for fast, reliable protection that improves safety and minimises damage.

Measurements	Upper Layer	Inner Core	Bottom Layer
Cushion Width - External	Rubber	Metal	Magnetic

## Options

Many different lengths to accommodate most forks

Available with edge guard

Special models available for telescopic forks

## Features & Benefits

- Easy to install or remove in seconds – no mechanical or electrical work
- Sticks securely to forklift forks
- 70 durometer (Shore A) black rubber upper layer, metal inner core, and magnetic bottom layer
- Resistant to abrasions, atmospheric agents, and oils
- Rib design provides additional coefficient of friction
- Stores within easy reach on any flat forklift surface
- Lightweight – does not limit forklift net capacity
- Improves noise reduction
