

Multi Sweep - Built to Last

The UK's Toughest Forklift Sweeper

Engineered for demanding industrial environments

Why **Multi Sweep** Exists

Multi Sweep sweepers are not designed to compete with low-cost sweepers — they're built for continuous operation in harsh industrial environments where reliability, durability, and performance matter.

Manufactured using reinforced components, non-puncture wheels, heavy-duty bearings, and robust structural steel, the Multi Sweep range is engineered to outlast and outperform budget machines that are typically built for light to medium use.

Many companies initially choose cheaper sweepers, only to face constant repair costs, downtime, and premature failure when used on demanding surfaces such as concrete, aggregate yards, construction sites, or heavy forklift traffic.

Multi Sweep is specifically designed to solve this problem.

- ✓ Heavy-Duty Engineering
- ✓ Lower Lifetime Cost
- ✓ Designed for Tough Sites
- ✓ Trusted Across the UK & Europe

Multi Sweep 270 Data Sheet

Heavy-duty specification for continuous industrial use

Elevate your site cleaning efficiency with the configurable Multi Sweep 270 Fork Mounted Road Sweeper – a versatile, budget-friendly powerhouse designed for seamless integration with standard forklifts.

Simple connection to
forklift hydraulics

Minimu oil flow rate :
25-30 ltr/minute

Model	Sweeping Width	Weight	Collection Hopper Capacity	Water Tank Capacity
MS-270	1200mm	550kg	270 ltr	200 Ltr

Features

- **Hydraulically Operated Collection Hopper:** Integrated as standard for efficient debris lifting and dumping, powered directly by forklift hydraulics for reliable performance.
- **Water Spray System:** Gravity-fed water stream for effective dust suppression, ensuring cleaner air and safer operations on dusty sites.
- **Compact Sweeping Width of 1.2m (47 inches):** Perfect for narrow aisle road sweeping in warehouses, yards, and urban environments.
- **270L (9.5 cu ft) Debris Capacity:** Large hopper for extended runs, collecting fine dust, sand, mud, bricks, and waste with ease.
- **Fully Enclosed Skirting:** Ensures debris is contained within the sweeping zone, improving collection efficiency while reducing dust escape.
- **Floating Broom System:** Adapts to rough terrain for consistent sweeping and extended brush life in demanding conditions.

Optional: Poly/Wire kerb side brush

Optional: Diesel power pack engine

Not All Sweepers Are Built the Same

Multi Sweep vs Standard Sweepers

Why Multi Sweep is the Professional Choice

A quick comparison of build quality, durability, and engineering

Feature	Multi Sweep	Typical Budget Sweeper
Build Category	Heavy-Duty Industrial	Entry-Level / Medium Duty
Wheel Type	Super-elastic, non-puncture with sealed bearings	Standard wheels, vulnerable to puncture/dust
Chassis Strength	Reinforced with additional 50mm box iron	Standard chassi with limited reinforcement
Motor Protection	8mm double-plated steel door	Basic singe-plate cover
Kingpins	10mm kingpins with brass bushings	Standard mild-steel kingpins
Debris Cutting Edge	Heavy-duty steel	Standard / light-duty
Fork Lock System	no-pin hand latch system	Pin-retained pockets
Durability Rating	Built for harsh, continuous use	Suitable for lighter, intermittent use
