

# Pedestrian Snow Plough - PSPV

## Pedestrian ‘V’ Snow Plough

The PSPV ‘V’ shaped push-along snow plough offers a simple, back-friendly way to clear driveways, paths, and pavements. Its design keeps your body upright, using bodyweight, arms, and legs instead of straining your lower back.

The angled ‘V’ blade lets snow slide off either side for efficient clearing. Robust mild steel construction with high-quality epoxy finish.

Mounted on 160mm solid rubber tyred wheels and roller bearings for smooth movement.

Measurements	Blade Width (mm)	Blade Height (mm)
Blade Dimensions	900	165
Handle Height (mm)	1110	
Handle Width (mm)	410	
Weight (kg)	8	

Typical Applications
Residential driveways and garden paths
Business premises walkways and entrances
Side passages and narrow access areas
Car parks and small spaces
Schools, hospitals and care facilities

Aspect	Pedestrian Plough	Conventional Shovelling
Back Strain	Minimal – uses legs and bodyweight	High – repeated bending and lifting
Clearing Speed	Twice as fast – bi-directional blade	Slower – one direction only
Effort Required	Half the effort – angled blade slides	Full manual scooping
Storage	Compact – hangs or stands easily	Takes up space when not in use

## Features & Benefits

- Simple upright operation reduces strain on lower back
- ‘V’ shaped blade allows snow to slide off either side
- Bi-directional – flip handle to plough left or right
- Robust mild steel construction with high-quality epoxy finish
- 160mm solid rubber tyred wheels with roller bearings for smooth movement
- Supplied fully assembled – ready to use
