

Pedestrian Snow Plough

The PSP bi-directional pedestrian snow plough makes clearing driveways, paths, and pavements simple and efficient. It cuts effort in half compared to shovelling by utilising bodyweight, arms, and legs.

Robust steel blade with angled design allows snow to slide off easily. Flip the handle to change direction instantly.

Manufactured for durability and ease – ideal for restricted areas like garden paths, side passages, and business walkways.

Measurements	Blade Width (mm)	Blade Height (mm)
Blade Dimensions	995	165
Handle Height (mm)	1110	
Handle Width (mm)	410	
Weight (kg)	8	

Typical Applications
Residential driveways and garden paths
Business premises walkways and entrances
Side passages and narrow access areas
Car parks and small spaces
Schools, hospitals and care facilities

Aspect	Pedestrian Plough	Conventional Shovelling
Back Strain	Minimal – uses legs and bodyweight	High – repeated bending and lifting
Clearing Speed	Twice as fast – bi-directional blade	Slower – one direction only
Effort Required	Half the effort – angled blade slides	Full manual scooping
Storage	Compact – hangs or stands easily	Takes up space when not in use

Features & Benefits

- Simple upright operation reduces strain on lower back
- Angled blade allows snow to slide off easily
- Bi-directional – flip handle to plough left or right
- Robust mild steel construction with high-quality epoxy finish
- 160mm solid rubber tyred wheels with roller bearings for smooth movement
- Supplied fully assembled – ready to use
