

Pallet Puller - PU Series

The PU series pallet puller is designed to pull or slide heavy pallets and crates to the edge of docks or lorries, simplifying unloading. It grips securely and releases automatically for efficient handling.

Rugged steel construction with self-cleaning heads unaffected by wood particles, paint, or grease. One-piece curved heads with integral spurs for strong stringer grip.

Available in three models to suit different pallet stringer sizes and capacities.

| Model Ref | PU10 | PU20 | PU30 |
|---------------------------------|----------------|----------------|--------|
| Max Pallet Weight Capacity (kg) | 2270 | 2270 | 2045 |
| To Suit Max Stringers (mm) | 76 | 140 | 89 |
| Type of Scissor Action | Double Scissor | Single Scissor | Cammed |
| Weight (kg) | 9.5 | 5.5 | 6.4 |

Typical Applications

- Loading docks & lorry unloading
- Warehouse pallet retrieval
- Container de-stuffing
- Distribution centres & logistics yards
- Manufacturing & storage facilities

Features & Benefits

- Pulls heavy pallets or slides crates to dock/vehicle edge
- Variable jaw width – grabs securely and releases automatically
- Rugged steel construction for heavy-duty use
- Self-cleaning heads – unaffected by wood particles, paint, or grease
- One-piece curved heads with integral spurs for strong pallet stringer grip
- No power or tools required – simple manual operation
- Versatile jaw design – grips securely on various pallet stringer widths
- One-piece curved head – integral spurs provide strong, reliable grip on pallet stringers
- Lightweight & portable – easy to carry and store when not in use

Safety & Usage Tips

- Apply pull force slowly & evenly
- Ensure pallet is stable before pulling
- Keep clear of moving pallets
- Inspect for wear before each use
