

Forklift pallet stops, the ultimate solution to prevent product and pallet damage while ensuring the forklift forks don't protrude too far through the pallet. These stops are not only simple but also cost-effective, providing a reliable safeguard for your valuable goods.

With our forklift pallet stops, you can say goodbye to costly product and pallet damage caused by protruding forks. Invest in our simple yet effective solution and enjoy peace of mind knowing that your goods are protected.

Safety is our top priority, our forklift pallet stops are designed to be securely retained to the forklift forks using heel pin retention. This ensures that the stops stay in place, providing a stable and secure barrier for your pallets.

Customised to your specific needs. Whether you require a specific length or backstop height, we can create the perfect solution for you. No more worrying about one-size-fits-all options that may not meet your requirements.
