

Cruciform Bag Handler (CBH)

The cruciform bag handler is our best selling crane slung bag lifter. The unit allows a bulk big bag to be safely and quickly lifted via an overhead crane/forklift truck/telehandler etc.

The unit comes as standard with pressed end caps that restrict the bag straps from moving during a lift, ensuring the bag is held securely during a lift. Other options available include hooks and shackles fitted to the ends.

The legs are positioned perpendicular to the next, and are 1000mm (1m) from tip to tip, ensuring it will suit the vast majority of standard bulk bags found on the market. Larger and smaller leg lengths are available upon request, if you happen to have a non standard bag.

The unit comes as standard with a heavy duty rotating lifting point fitted to the centre of the structure. This lifting point can be rotated under load, to ensure any chains used from the crane hook don't twist during use. The lifting point should not be used by the user to rotate the attachments and load during a lift, a swivel hook on the crane should be used to better position the bag before unloading.

The unit comes as standard rated to lift 1000kg bulk bags, but larger capacity units are available upon request.

All bag handlers come as standard with a 12 month warranty, and are supplied fully certified complete with a certificate of conformity and are fully CE marked.
