

Fork Mounted Bag Filling Skip (FM-BFS)

The recently developed bag filling skip enables the user to quickly and efficiently fill big bags from a dumper or scoop. The skip simply fits onto the truck forks and comes complete with four lifting points on the base for the bag to hang from. Once the bag is hung, the desired contents are simply loaded into the hopper and the bag fills. The tapered shape of the hopper ensures that spillage is minimised, plus the bag can be moved from place to place by the attachment, without the need to use a secondary attachment.

Great for builder's yards and trade centres, this attachment is guaranteed to save you time and increase efficiency. Whilst making sure the operation of bag filling is done safely and effectively.
