

Fork Mounted Pallet Rotator (FMPR)

The popular fork mounted pallet rotator is the perfect attachment when you need to manipulate pallets to solve your handling problem or improve your operation. The rotator simply slips onto the forks of the truck, and is locked behind the fork heel via quick release pins. The forks on the rotator are standard forklift truck forks, so come complete with a tapered toe section for ease of entry into pallets. The fork spread is even adjustable to ensure you can adjust your attachment to lift various size pallets.

Rotation can be carried out via a crank handler (FMPR-1) or via chain wheel (FMPR-2) if you require rotation above waist height. Bespoke models available with hydraulic gearbox available also upon request.

Attachments Mass = 187kgs
C of G = 1201mm
Load Centre = 1890mm
LLC = 1455mm
Safe Working Load = 500kgs
