

Drum Pallet Loader (FDH Series)

The Raptor hydraulic drum truck is designed to allow the operator to load or unload drums from pallets. With a straddle leg design, the drum truck is able to glide over standard pallets and grab drums from the middle of the pallet. With Poly wheels for manoeuvrability, drums can effortlessly be transported throughout your facility without the need for manual handling. Lifting and lowering of the drums is carried out by a manually operated hydraulic pump. The hydraulic drum truck has a lower lifting height limit of 880mm and a maximum lifting height limit of 1380mm, allowing drums to be lifted off the floor by 500mm, with a 11.5mm lift per stroke.

Model Ref	Capacity (kg)	Drum Size (Litre)	Drum Type	Lift Height (mm)	Weight (kg)
FDH-DTF450	450	210	1	500	50

The perfect solution to pallet loading / unloading

- ✓ Easily glides over pallets
- ✓ Straddle design allows drums to be lifted from middle of a pallet
- ✓ Allows drums to be lifted from corner of containment skis
- ✓ Highly manoeuvrable with large poly wheels
