

Well Ring Lifter (Type 685)

Developed over thirty years ago, the Type 685 allows safe and easy handling of concrete manhole rings. Used extensively through the supply chain from manufacturers to builders, merchants to hauliers, the Type 685 Well Ring Lifter can be used off the forks to handle rings 900mm - 1800mm diameter. A safety chain prevents the 685 being displaced from the forks.

An optional central lifting eye allows it to be used off hook cranes.

In typical Scandinavian style, Type 685 offers an uncompromising design and unrivalled build quality. Each grab is fitted with a high quality automatic locking mechanism ensuring that the independent grabs work synchronously. It has a proven record of handling rings safely and efficiently for over three decades.

Specification	
Wall Thickness	65 - 150mm
Ring Diameter	900 - 1800mm
SWL	2000kg
Unit Weight	180kg

Features & Benefits

Used off the forks to handle a wide range of rings from 900mm to 1800mm diameter

Supplied with safety chain to prevent displacement from the forks

Optional central lifting eye allows for use off the hook cranes

High quality auto locking mechanism ensures the independent grabs work synchronously

Proven track record with over three decades service in the field
