

This hand held magnetic sweeper provides the perfect solution for picking up small ferrous metal objects such as nails, nuts, bolts, tacks, paperclips and metal shavings from the workshop or garage floor.

Constructed from stainless steel, this hand held magnetic sweeper comes with a removable tubular steel handle (for transportation) and puncture proof robust rubber tyres.

With an in-built release mechanism (contained within the handle), collected debris can be released with ease with a simple pull of the mechanism

Not just for use within workshops and garages, the hand held magnetic sweeper is also possible with horse owners for removing nails and other metal objects from bedding and courtyards

Model Ref	Width (mm)	Depth (mm)	Extended Height (mm)	Pull Force (kg)	Weight (kg)
PPM-400	400	100	1100	5	5

Features & Benefits

- Stainless steel construction for longevity
- Permanent magnet with no external power required to operate
- Large robust rubber wheels ensures puncture proof manoeuvrability
- Removeable tubular handle allows sweeper to be easily stored for transportation
- In-Built release mechanism allows metal debris to be easily dropped into a bin
- 5kg pull force caters for a wide range of metal debris collection
