

# Why buy Contact's fork protection sleeves ?

## **No Quibble Guarantee:**

If you are dissatisfied in any way with your Contact fork protection sleeves performance, return it to us, and we will refund you in full.

## **Tested & Certificated:**

All Contact's fork protection sleeves are 'CE' marked, fully tested and and come supplied with Certificates of Conformity for compliance with Health & Safety regulations. For specific compliance, all Contact's fork protection sleeves conform to the industry required ISO 13284 British Standards.

## **Prevent product damage:**

To ensure product damage is kept to an absolute minimum, or prevented completely, Contact's fork protection sleeves come coated with durable 3mm thick polyurethane coating. Polyurethane coating takes away the steel on steel contact that can occur with normal forklift fork handling.

## **Compliant With BS-EN Recommended Standards:**

To prevent the fork sleeves from 'riding' up the rear of the fork, which can be a common problem with forklift sleeves when used on certain types of forklift forks, All Contact's fork protection sleeves, in keeping with BS-EN recommended standards, utilise a 'closed base' rear strap design.

## **Heavy Duty Construction:**

Manufactured from 5mm thick steel with additional 8mm thick internal strengthening plates, Contact's forklift sleeves are built to meet the rigours of heavy industrial usage whilst offering resultant long service life qualities .

## **Simple 'Drive In' Design**

For easy fitment of Contact's forklift protection sleeves to the forklift fork, no manual handling is required. With a removeable heel pin design, the forks of the fork truck can be simply driven into the fork sleeves.

We hope the above helps demonstrate the quality and safety aspects of a Contact pair of forklift fork protection sleeves, and in doing so, we welcome the opportunity to supply you with high quality pair of fork sleeves to assist with your load handling requirements.
